The Trilogy mixed-mode ventilator’s mouthpiece ventilation (MPV) incorporates a ‘kiss’ trigger with signal flow technology that detects when a patient engages and disengages from the mouthpiece to deliver on-demand ventilation. An interlocking support system combines with Trilogy’s breathing circuit and can be attached to various surfaces in many configurations with the use of a clamp designed for use on flat or rounded surfaces. The interlocking support circuit can be adjusted to enhance comfort and accessibility.

Changes to Ventilator-Assisted Living in 2015

Starting in February 2015, your Ventilator-Assisted Living e-communication will have a new look. Ventilator-Assisted Living (Volume 29, Number 1) will arrive in your email with easier access to articles and with easier ability to share the information.

Having your most current email is important! The newsletter will not be available in print. Note: The newsletter will be sent from info@ventusers.org.

Astral™ offers a broad range of therapy modes for adult and pediatric patients, while delivering excellence in leak and valve ventilation for invasive and noninvasive use. The combination of its internal and external batteries delivers an impressive 24-hours total runtime. So patients can now go longer and travel further, knowing they have the reliability of Astral behind them. Combined with the lightweight Quattro Air NV full face mask, ResMed delivers a complete therapy solution designed for performance and comfort.
